## MEDIA RELEASE

September 2012

### Hydrate at home with custom temperature, filtered drinking water

Breville has introduced a compact benchtop appliance that delivers crisp, filtered drinking water on tap with a choice of different temperatures – from room temperature to refreshingly cool.

Saving on bottled water and valuable fridge space, the **Breville Chill Control** (BWC200) water filter is able to chill water in around an hour. Utilising superior cooling technology to effectively reduce heat and transfer cold to the water it can help quench thirst quickly and easily.

Whether needing to cool down fast after exercise or simply topping up the daily water intake, the variable water temperature caters for every palate and seasonal temperature preferences.

The appliance's temperature selection is easily adjusted with a sliding temperature gauge for instant filtered water at the desired temperature. Water is drawn from the chilled water reservoir and combines with the ambient water to achieve the selected temperature.

The Breville Chill Control water filter features an integrated and replaceable Brita Maxtra filter cartridge to reduce the intake of chlorine, lead, copper and lime scale. An LCD advises filter status and the accessible stainless steel chilling chamber can be easily cleaned to ensure water is always at its freshest.

With a large seven litre capacity, sleek white design and extra height allowance for filling tall bottles, the Chill Control can refresh day in and day out no matter the temperature.

**Breville Chill Control water filter with variable temperature control (BWC200) \$169.95 rrp**
